

Reflection on Micro-teaching session

By: Babak Saremi

- a lesson design principle for promoting deeper learning that you explored during your micro-teaching

- Lesson plans should include several effective factors as followings:

- Lesson should be linked to the past knowledge and future applications/knowledge
- It always must start with lesson objectives and outcomes and end with a review of what was covered
- There are many tools by which students' involvement can be improved.
- Students should have different options for the type of involvement.

- a brief description of a new teaching technology and how you incorporated it into your micro-teaching lesson

- I learned Mentimeter which is a great tool by which students' engagement would be improved. Now, my classes are more interactive

- an item of feedback from your peers and how you will use it to inform your teaching practice.

- Students' participation was the thing that I noticed as an area which needs improvement. However, I have found that in-class sessions include more active participation of students. Now, I'll try to use Padlet and Mentimeter more.
